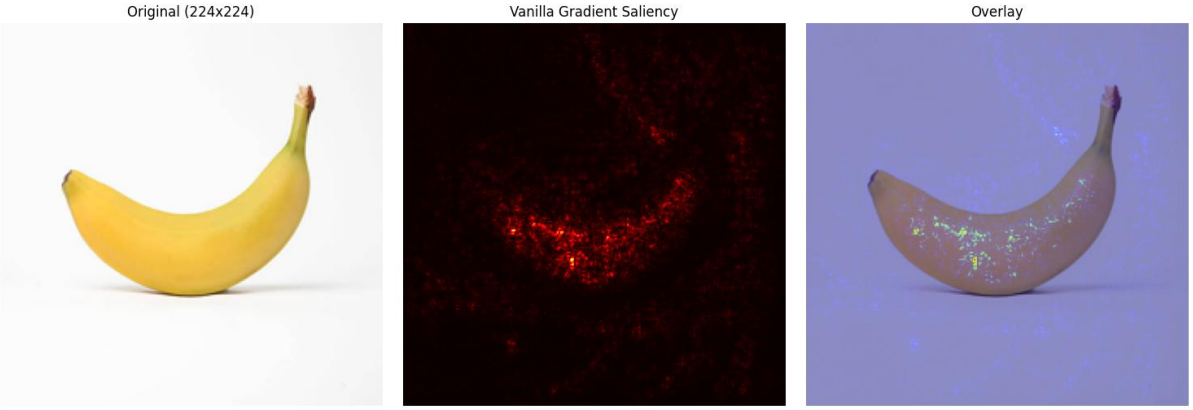
Explainable AI Banana Problem – 3

Results:

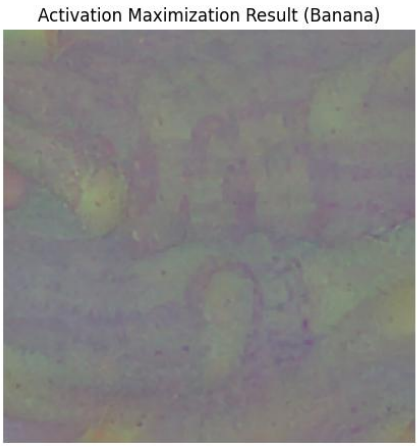
1. **Task 1**:

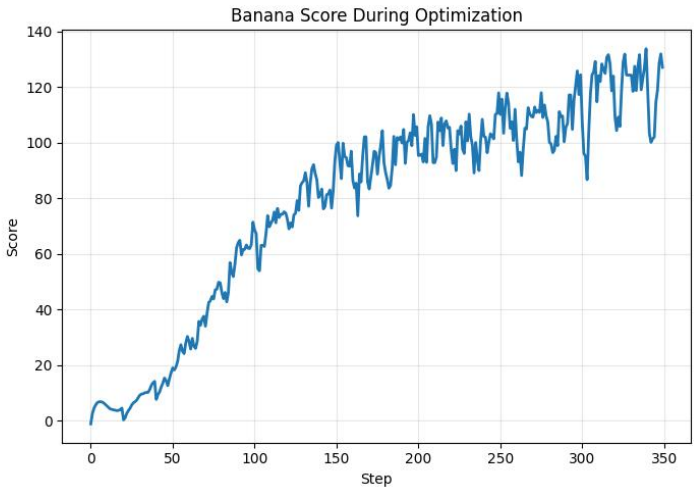
Banana class score is high (about 11.51)

The saliency map highlights banana contours and edges, with some scattered background noise, which is expected for vanilla gradients.



2. **Task 2**

Banana score rises from low values to about 127.10 by step 350.




The generated image is an abstract banana-like texture pattern (typically yellow/curved and somewhat noisy), consistent with CNN texture bias.
